this is the first book addressing in full the most important aspects of the angiotensin 1-7 the key peptide of the protective axis and the main component in the new modulatory concept of the renin angiotensin system it features a detailed review of angiotensin 1-7 and its receptor mas comprising the historical background enzymatic pathways for generation functions integrative aspects of its protective profile and its therapeutic potential it also encompasses a comprehensive presentation of current knowledge about its widespread biological actions on several tissues as well as the most recent scientific achievements emerging from preclinical and clinical trials dr santos is a renowned researcher on the renin angiotensin system with remarkable achievements regarding the role of peptides such as alamandine and angiotensin 1-7 he has also worked on the potential clinical applicability of angiotensin 1-7 related drugs for cardiovascular diseases he has an extensive publication record in the field including the publication of the book the protective arm of the renin angiotensin system academic press 2015 angiotensin 1-7 will make a unique contribution to the literature and will be an important resource for biomedical students and researchers medical practitioners and any other professional interested in this peptide and its role in the renin angiotensin system

initially genetic disorders were all considered as rare diseases at present in the mid of 2009 the omim

catalogue contains information on more than 12 000 entries of which about 2500 are available for clinical testing based on the identification of the responsible gene defect however altogether it has been estimated that about 8 percent of a population in the economically developed countries will during their lifetime suffer from a disease mainly as the result of their genetic constitution adding to that it is estimated that all diseases have a genetic component which will determine who will be at a higher than average risk for a certain disorder further it is postulated that in the near future this genetic profiling could become useful in selecting an appropriate therapy adapted to the genetic constitution of the person thus genetic disorders are not rare measuring quality of health care related processes became an issue in the 1990s mainly in laboratory medicine but also for hospitals and other health care systems in many countries national authorities started to implement recommendations guidelines or legal procedures regulating quality of health care delivery in laboratory medicine in parallel the use of accreditation as a method assuring high quality standards in testing came in use with the increasing possibilities of performing molecular genetic testing genetic laboratories needed to become involved in this process as many genetic disorders are rare most laboratories worldwide offered analysis for a specific set of disorders and therefore very early on a transborder flow of samples occurred while international quality criteria iso have been in existence for a number of years the regulation of quality issues still may differ between countries based on their personal experience in the varying fields of quality research and clinical implementation of quality criteria in genetic services the authors of thisbook share their experience and give examples of the implementation of quality issues in national quality systems worldwide this book which is the result of the effort of many persons is destined to aid laboratory managers and counsellors health care managers and other stakeholders in national or international health care service to improve the services to the benefit of patients with suspected genetic disorders

endoscopy is a fast moving field and new techniques are continuously emerging in recent decades endoscopy has evolved and branched out from a diagnostic modality to enhanced video and computer assisting imaging with impressive interventional capabilities the modern endoscopy has seen advances not only in types of endoscopes available but also in types of interventions amenable to the endoscopic approach to date there are a lot more developments that are being trialed modern endoscopic equipment provides physicians with the benefit of many technical advances endoscopy is an effective and safe procedure even in special populations including pediatric patients and renal transplant patients it serves as the tool for diagnosis and therapeutic interventions of many organs including gastrointestinal tract head and neck urinary tract and others

this book intends to bring together a panel of renowned experts in the field of vascular biology and diabetology to integrate the current understanding of the pathogenesis and pathophysiology of vascular diseases in diabetes mellitus this attempt is significant given the increasing interest in this area as the prevalence of vascular diseases continues to escalate globally patients with diabetes are at a higher risk of structural and functional changes in all vessel walls of the human body vascular complications of diabetes are leading causes for both morbidity and mortality in recent years several articles have focused on advancing our knowledge on the profound effect of hyperglycemia and insulin resistance on building up

vascular wall inflammation leading to endothelial dysfunction in patients with diabetes mellitus other reports have elaborated on the various disorders hyperglycemia can lead to their therapies adverse effects and complications there are also studies that highlight the role of factors that induce vascular wall alterations in hyperglycemia in this book we attempt to discuss vascular disease progression in diabetes with a unique approach we attempt to provide a complete perspective of the pathophysiology of vascular complications and then dissect each of the factors that play a key role in accelerating vascular wall alterations in diabetes each of these factors has been adversely implicated in the initiation and progression of disease to a large extent in this collection for the first time all these factors would be described under a common canopy further the text would emphasize on pathogenesis of micro vascular complications of diabetes such as retinopathy neuropathy and nephropathy pharmacological therapies for treating vascular dysfunction in diabetes mellitus would also be reviewed this compendium hopefully would be an invaluable replacement to scores of literature on diabetic vascular disease and would be of great interest to clinicians academicians medical students and researchers the book will be divided into seven sections each emphasizing a common incentive to development of vascular disease in diabetes section i deals with pathophysiology of diabetic vascular disease beginning with an update on the global burden of diabetes mellitus and its vascular complications the pathophysiology and pathogenesis of diabetes associated macrovasculopathy how hyperglycemia functions as an atherogenic factor effects of hyperglycemia on smooth muscle accumulation in vascular lesions and genetic susceptibility for increased risk of vascular disease in diabetes will be discussed in the following chapters of this section the next section section ii surveys the process of endothelial dysfunction under hyperglycaemia and hyperinsulinemia and their effects on angiogenesis vascular remodeling and wound healing a chapter is also dedicated to the endothelial progenitor cell population and its dysfunction during development of vascular complications in diabetes section iii will highlight the molecular mechanisms underlying endothelial dysfunction various pathways such as nitric oxide synthase pathway oxidative stress pathway renin angiotensin system and increased vascular superoxide production in the initiation and progression of vascular disease in diabetes this section also covers role of endothelin monocyte derived cytokines peroxynitrate and adipokines in macrovascular complications of diabetes metabolic factors such as advanced glycation end products atherogenic dyslipoproteinaemia and homocysteine will be reviewed in section iv whereas an overview of the hemostatic factors such as platelet dysfunction hyperglycaemia induced thrombin formation and aberrant clot lysis will be dwelled upon in section v section vi includes chapters on microvascular complications of diabetes which encompasses long term complications of diabetes affecting small blood vessels of the eye kidneys and nervous system the pathogenesis and mechanisms of these complications would be detailed here the final section section vii of the book will consider mechanism of action of drugs for treating endothelial dysfunction in diabetes mellitus which would elaborate on lipid regulating therapies such as statins as well as other therapies such as ace inhibitors angiotensin ii receptors insulin metformin and their effects on enhancing vascular function in diabetes div divwe intend to invite authors who symbolize a multidisciplinary approach to this complicated disease the proposed authors include clinicians who understand the trend of vascular complications in their long term clientele epidemiologists with a holistic view basic and experimental researchers with years of experience in dissecting the factors leading to endothelial dysfunction and clinical researchers with the skill of translating bench work to the

beside we expect this book will be of significant value and interest to the same group of clinicians researchers post doctoral fellows and medical and non medical graduate students the novel assimilated insights could stimulate development of mechanism based prevention and therapeutic strategies providing a promising option to limit cardiovascular complications in diabetes mellitus
